## **Detailed Action**

### **Response to Arguments**

Applicant's arguments, filed October 14<sup>th</sup>, 2008, with respect to the 103 rejection of the claims have been fully considered and are persuasive. The 103 rejection of the claims has been withdrawn. In particular the argument that the combination of Swanson with Fercher does not show using two lens components with positive focal lengths that provide a constant propagation time has convinced the examiner to remove the rejection.

### **Reasons for Allowance**

**Claims 1-7 & 36-63** are allowed.

The following is an examiner's statement of reasons for allowance:

As to **Claims 1, 36, & 49**, the prior art of record, taken alone or in combination, fails to disclose or render obvious using two lenses of positive focal length that are positioned to provide a constant propagation time for the low coherence optical radiation propagating from a point on the transverse scanning surface to a corresponding conjugate point on an image plane, in combination with the rest of the limitations of the claim.

### **Conclusion**
